

Engineering – Space System

Speaker: Alysa Sakkas

Alysa Sakkas is a Systems Engineer at Lockheed Martin Space Systems Company. Prior to being hired by Lockheed Martin, Alysa received a Computer Engineering degree from the University of Michigan. She began her career as a software/firmware developer, gradually expanding and transitioning to larger systems engineering and system integration roles beyond the computer engineering discipline. With more than 25 years in the aerospace industry, she has supported all aspects of the space systems program lifecycle from concept development to development, test, delivery, and operation of space systems. She enjoys the opportunity to continuously learn and also enjoys participating in student outreach programs. She has spoken at many schools about her career path and also serves on the University recruiting team for Lockheed Martin.
